Anti-Spatter Sprays & Accessories

ANTI-SPATTER SPRAYS & ACCESSORIES

Anti-Spatter sprays prevent the spatter build up during your welding applications. It helps saving time and money in the weld process and speeding up your workflow of production. With our Spray you eliminate the need to grind or brush the surface after your welding application.

Great together!
Cost efficient and more safe!

CERAMIC
Ceramic Spray, non-harmful, 400ml

COATING CAP
for Ceramic Antispatter Spray

ANTI SPATTER
Anti-Spatter-Spray, 400ml

The thin coating creates a solid protective barrier against spatter on consumables and tools.

Resistance to temperature above 1400 °C

A single application required for 8 hours of welding. Which caused less downtime in both robotic and hand-held welding applications.

Use with the Ceramic Coating Cap for a better economical use.

1 CT = 12 x 400 ml

PART NUMBER
RP002-400

The Ceramic Coating Cap for the ceramic spray ensures a fully yet economical application.

Drying in 5 seconds, the Ceramic Coating Cap caused significant cost savings through less consumption while protecting the welder and the welding environmental by controlling noxious fumes from spreading.

Contoured specifically for various gas nozzle shapes and geometries while applying the spray compound quickly and precisely.

PART NUMBER
RP002-CAP

This water based, nonflammable Spray provides a quick, easy and safe way to prevent the adherence of spatters on any metal surface.

0% harmful effects

No residues during welding, provides welding without pores, biodegradable and compatible with painting processes.

Excellent on all types of surfaces including galvanized surfaces.

1 CT = 12 x 400 ml
